

In some cases, properties can be conflicting

“Do not record the identity of the user that performed an action” (Anonymity)

“Knowing that someone
has done an action”
(Accountability)

“Someone cannot deny having
done an action” (Non-repudiation)

In some cases, properties can be conflicting

“Do not record the identity of the user that performed an action” (Anonymity)

Dealing with security

- ✓ Security is often a compromise
- ✓ Security is engineered
