

Host Discovery

~ confidentiality

By default, hosts answer to ICMP echo request messages

➡ An attacker scan an entire network to find IP addresses of active hosts

e.g. **nmap** (does that among other things)

IP Spoofing

integrity
availability

- Routers do not validate the source
 - Receiver cannot tell that the source has been spoofed
- ➡ An attacker can generate raw IP packets with custom IP source fields
- e.g. DOS (blackhole) and MITM attacks
