

One say that such program/os is more vulnerable

<b>Some are ...</b>	<b>so ...</b>
more deployed than others	more targeted by hackers
more complex than others	more multiple points of failure
more open to third-party code than others	more “amateur” codes

# How to compare OS and programs?

**Figure 2** Ranking of the Top-10 vendors with most vulnerabilities per year. Oracle includes also vulnerabilities from Sun Microsystems and BEA logic.
