

What if the buffer is overstuffed?

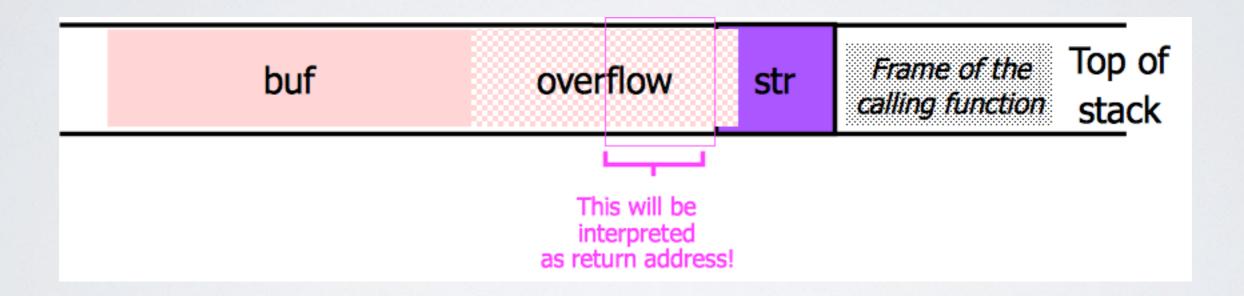

strcpy does not check whether the string at *str contains fewer than 126 characters ...

... if a string longer than 126 bytes is copied into buffer, it will overwrite adjacent stack locations

What if the buffer is overstuffed?

strcpy does not check whether the string at *str contains fewer than 126 characters ...

... if a string longer than 126 bytes is copied into buffer, it will overwrite adjacent stack locations

Injecting Code

Shellcode

code ret str Frame of the calling function

Attacker puts actual assembly instructions into his input string, e.g., binary code of execve("/bin/sh")

In the overflow, a pointer back into the buffer appears in the location where the system expects to find return address
