

Securing the web architecture means securing ...

The network

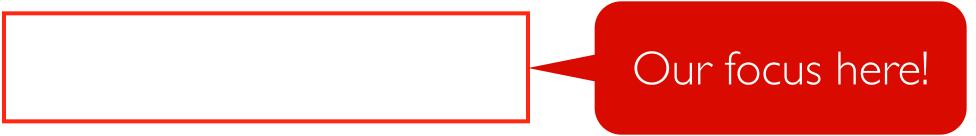

The DNS (Domain Name System)

The web server operating system

The web server application (Apache for instance)

The database application (Oracle for instance)

The web application

## Securing the web architecture means securing ...

- The network
- The DNS (Domain Name System)
- The web server operating system
- The web server application (Apache for instance)
- The database application (Oracle for instance)
- The web application

Our focus here!

## What is a web application?
