Bus Link (a.k.a LAN - Local Area Network)

Several hosts are connected to the same medium with a unique physical address called e.g. Ethernet and WiFi uses MAC

Media Access Control addresses

→ Easier for the attacker to intercept messages since they are all broadcasted to the same medium

Packet Sniffing over Ethernet or WiFi

- All messages are transmitted on the medium with the MAC address of the recipient
- Each network interface only picks messages that correspond to its MAC address
- → An attacker can set its network interface in promiscuous mode to capture (sniff) all traffic e.g. Wireshark
