# Preventing TCP-syn flooding

**TCP-syn cookie** prevents from maintaining a queue of half-opened TCP connections

# Preventing DOS and DDOS attacks in general

**Network Ingress Filtering** (a.k.a BCP 38)

*Best Current Practice* to limit the impact of DOS and DDOS

1. Deny access to network traffic with spoofed addresses
2. Ensure that traffic is traceable to its correct source network

➡ Implemented by ISPs (Internet Service Providers) and Content Delivery Network (CDN)
