

Largest RSA number factored so far

In September 2026, Eric Lu has factorized RSA-260
(862 bits key, ~ 74 bits entropy)

“In total, I estimate that this factorization cost about 4,900 GPU-days, or 13.5 GPU-years, which is about \$400k at current market prices.”

ECC - Elliptic-Curve Cryptography

Key Size	256 or 448 bits
Speed	~ factor of 10^6 cycles / operation • Key generation: 1 - 5 ms (way faster than RSA) • Encryption: 1 - 5 ms • Decryption: 1 - 5 ms
Mathematical Foundation	Elliptic curves over finite fields
