

GPG Keys

An **GPG Identity** is two long-term keys pairs

- One for signing (**sSig**, **pSig**) using either DSA, ECDSA or EDDSA
- One for key exchange (**sKem**, **pKem**) using either DH or ECDH

The **trust model** can be any of these

- [Default] Out-of-Band Key verification via key fingerprinting (high trust)
- [Optional] Transitive Trusts (lower trust)
- [Optional] Trusted Third-Party Server (lower trust)

Modern GPG - Signature Only
