What a good password policy looks like in 2026

NIST SP 800-63B-4 (July 2025) recommends or requires :

- **At least 15 characters** when used as a single factor
  a lower minimum of 8 permitted when used with MFA
- **No arbitrary password composition requirements or routine expiration**
- **Screening against commonly used and compromised passwords**
- Support for password managers and autofill
- Rate limiting for online guessing

Is your password on a password-list?

Has your password been leaked in a previous breach?

https://haveibeenpwned.com/

➡ **If yes** do not only change that password for that service but **change it for all services that use the same one**
