Millions of LinkedIn passwords reportedly leaked online

A hacker says he's posted 6.5 million LinkedIn passwords on the Web -- hot on the heels of security researchers' warnings about privacy issues with LinkedIn's iOS app.

Update 1:08 p.m. PT: *LinkedIn confirms that passwords were "compromised."*

LinkedIn users could be facing yet another security problem.

A user in a Russian forum says that he has hacked and uploaded almost 6.5 million LinkedIn passwords, according to The Verge. Though his claim has yet to be confirmed, Twitter users are already reporting that they've found their hashed LinkedIn passwords on the list, security expert Per Thorsheim said.

Hackers post 450K credentials pilfered from Yahoo

Credentials posted in plain text appear to have originated from the Web company's Yahoo Voices platform. The hackers say they intended the data dump as a "wake-up call."

by Steven Musil | July 11, 2012 11:06 PM PDT

Follow

Yahoo has been the victim of a security breach that yielded hundreds of thousands of login credentials stored in plain text.

The hacked data, posted to the hacker site D33D Company, contained more than 453,000 login credentials and appears to have originated from the Web pioneer's network. The hackers, who said they used a union-based SQL injection technique to penetrate the Yahoo subdomain, intended the data dump to be a "wake-up call."

What a good password policy looks like in 2026

NIST SP 800-63B-4 (July 2025) recommends or requires :

- **At least 15 characters** when used as a single factor
  a lower minimum of 8 permitted when used with MFA
- **No arbitrary password composition requirements or routine expiration**
- **Screening against commonly used and compromised passwords**
- Support for password managers and autofill
- Rate limiting for online guessing
